

Pepper 'Red Skin'

Selling

End of May to June

Features

White flowers in late Spring. Deep green peppers mature to deep red in mid Summer.

Benefits

A compact plant, producing numerous fruits early in the season. Excels in a pot. The peppers are very sweet and ideal for salads and stir fries.

Story

This is a type of bell pepper. These peppers contain a recessive gene which prevents capsicum being produced. Capsaicin is the compound in peppers which makes them 'hot' to eat.
